

SERVICE:SNS

Devadharshini T

The image displays two screenshots of the AWS Management Console interface for the Amazon SNS (Simple Notification Service) in the eu-north-1 region.

Top Screenshot: SNS Overview
The URL is `https://eu-north-1.console.aws.amazon.com/sns/v3/home?region=eu-north-1#/homepage`. The page features a dark header with the text "Notification Service" and "Pub/sub messaging for microservices and serverless applications." Below this, a description states: "Amazon SNS is a highly available, durable, secure, fully managed pub/sub messaging service that enables you to decouple microservices, distributed systems, and event-driven serverless applications. Amazon SNS provides topics for high-throughput, push-based, many-to-many messaging." A "Topic name" input field contains the text "Reimbursement", with a "Next step" button and a "Start with an overview" link. A "Pricing" section notes that Amazon SNS has no upfront costs and is pay-as-you-go.

Bottom Screenshot: Create Topic Configuration
The URL is `https://eu-north-1.console.aws.amazon.com/sns/v3/home?region=eu-north-1#/create-topic`. This screen shows optional configuration settings for a new topic:

- Delivery policy (HTTP/S) - optional**: The policy defines how Amazon SNS retries failed deliveries to HTTP/S endpoints.
- Delivery status logging - optional**: These settings configure the logging of message delivery status to CloudWatch Logs.
- Tags - optional**: A tag is a metadata label that you can assign to an Amazon SNS topic. Each tag consists of a key and an optional value.
- Active tracing - optional**: Use AWS X-Ray active tracing for this topic to view its traces and service map in Amazon CloudWatch.

At the bottom, there are "Cancel" and "Create topic" buttons.
